## WOOD SPECIALTIES

### Timeless beauty with warmth and style

Stairworks offers a wide selection of stair and railing styles; from stocked standards, to customized single orders. All our stairs and railings are available in a variety of wood species from the domestic to the exotic.

### A modern take on an old classic

The wood and steel combination has been modernized by Stairworks. We incorporate individual steel balusters into our wooden railing system, thus eliminating those unattractive plastic coated metal rails that were commonly seen in the past. All our steel balusters are available in a variety of styles and finishes.

### Enhancing the elegance of our stairs and railings

Other design enhancement products Stairworks offer are interior | exterior decorative columns. All of our columns can be designed to support, or to wrap around existing structures.

Also available at Stairworks - Exterior Aluminum Railing Systems, in a variety of styles and colours.

### We do custom!

At Stairworks we recognize that it's all in the details. We realize that all of our customers have unique styles and tastes. What separates us from our competition is our ability to create. Our product designs transition from room to room, creating a unifying motif throughout. With our advanced manufacturing capabilities and design experience, the sky's the limit!
